

CASING PIPES

OVERVIEW

Kothari casing pipes are manufactured using a special Lead Free uPVC compound. This makes them ideal for domestic wells, industrial wells, public and mining wells. These pipes are also anti-corrosive, which prevents chemicals in the soil from affecting them.

Kothari casing pipes are better than conventional metal pipes as they are lightweight, corrosion free and long lasting. These pipes do not alter the water quality and are recyclable. Casing pipes are easy to install as the threaded ends ensure that the pipes can be interlocked without the use of cements or adhesives.

FEATURES AND BENEFITS

Excellent stiffness helps pipes withstand external hydraulic pressure

Non-conductors of electricity

Cost Effective

Manufactured from a special PVC-U compound with extra toughness

Corrosion Resistance and Non Toxic

Easy and quick installation

Horizontal slots enable high laminar flow

Maintenance free and economical

AVAILABLE SIZES

Size in mm	Pressure Ratings	SDR
140 mm to 200 mm	4 kg to 6 kg	SDR 31, SDR 36, SDR 47

Available in plain socketed & Slotted types

APPLICATIONS
