

K-Lin Emitting Pipe NPC

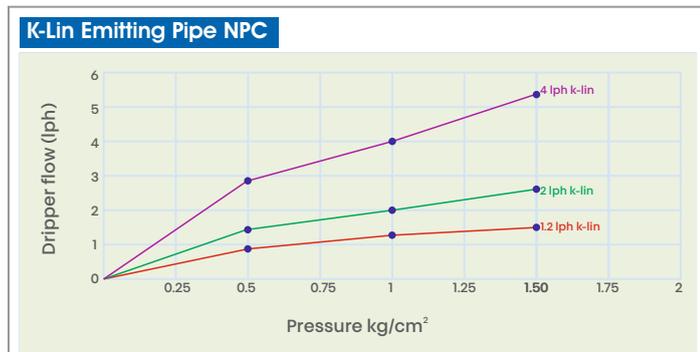

(Flat integral NPC dripline)

Features & benefits :

- Manufactured with advanced Israeli technology.
- Drippers with large inlet filter & clog resistant turbulent flow path.
- Made of special grade LLDPE material.
- Smooth inner surface minimize friction losses.
- Excellent flow characteristics.
- Drippers with low CV with high emission uniformity.

Applications :

- For irrigation of all types of crops like sugarcane, vegetables, cotton, floriculture plants etc.
- For irrigation of all types of fruit crops like pomegranate, banana, grapes etc.

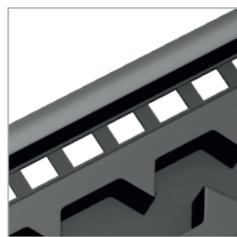

*Indicative graph

USP : K-Lin Emitting Pipe NPC

With double blue lining for laying convenience

Large inlet filter area for clog resistant emitting pipe

Unique turbulent labyrinth which avoids clogging

Smoothest inner surface

Available sizes : 12, 16, 20 & 25 mm from CL-1 to CL-4 with 20 to 120 cm dripper spacing.

Operative guidelines :

- Nominal operating pressure of 1 kg/cm².
- Filtration recommendation of 130 microns or less.
- Use kothari drip fittings to have maximum results.
- Use continuous acting air valve on submain.
- Keep the dripper direction vertically upward during laying.
- Always use NRV on mainline.
