

Nutrijet Fertigation system

Features & benefits :

- All models come with an inbuilt Iribeat controller.
- IOT & cloud-based computerized system.
- Volume base system comes with an inbuilt fertilizer & water flow sensor.
- Available wired & wireless models with expandable plug & play facility.
- Special injection pump system used for very high performance.
- Very little time takes for pH control with high accuracy.
- No manual interference for fertigation injection quantity adjustment.
- Simple, reliable fertilization system in accordance with the agronomic requirements.
- Fertilizer machine available with multiple injection system with multiple tank selection.
- System automatically generates reports.

Applications :

Nutrijet machine injects the fertilizer with every drop of water & controls the exact concentration of fertilizer in the water by measuring the water Ec & pH.

Technical specifications :

- 1 Provided with nutrijet sampling pump or booster pump.
- 2 Fertilizer injection of 300 to 1200 lph is possible without any pressure loss.
- 3 Nutrijet machine can be equipped & programmed as per field demand.

USP : Nutrijet Fertigation System

Fastest fertigation output with motorized venturi injection

Ec-pH control possible to the highest accuracy

Mobile control & operation possible from anywhere in the world

Online software, hardware support for any repair
