

KOTHARI[®]
— IRRIGATION —

DRIP | SPRINKLER | AUTOMATION | MULCHING

Quick Pressure Relief Valve

Features & benefits :

- Hydraulically operated, diaphragm actuated control valve.
- Relieves excessive line pressure when it rises above the preset maximum limit.
- Responds to rises in pressure quickly accurate & with high repeatability by opening fully.
- Unitized flexible super travel (FST) diaphragm & guided plug :
 - a) Accurate, stable control with smooth closing.
 - b) Requires low opening & actuation pressure.
 - c) Prevents diaphragm erosion & distortion.
- Made of engineering plastic material with industrial grade design with easy pressure setting & servicing.
- Highly durable, chemical & cavitation resistant.
- Adaptable onsite to a wide range of end connection sizes & types.

Applications :

- Head unit, mainline burst protection.
- Momentary pressure peak elimination.
- System failure visual indication.

Available sizes :

2", 2L & 3" with setting range of
1 to 7 kg/cm² or 1 to 10 kg/cm²
According to the type of specific pilot spring.
